## hCard microformat

*Easily create contact information for your employees and organizations using machine-readable content that displays beautifully in Google, Yahoo, Bing and other search engines. Standardized location information helps SEO.*

- Automatic formatting of contact details to display in major search engines using hCard format.
- Any kind of relevant contact info can be used, including nicknames and birthdays.
- Works well with social media platforms.
- Can be imported into applications like Apple's Address Book.
- Good for SEO because:
  - details are standardized and machine-readable
  - location-specific details are fed directly into search engine's location services (e.g., Google Places)

## Flexible editing

*Creating and updating content on a d2admin website is easier. Changes can be made offline, and scheduled for review and publication later. A/B testing allows for market trials to see what works and what doesn't.*

- Versioning allows for multiple versions of the same content to be created, edited, and saved to a customer's library.
- Scheduling allows for these different versions to be published at different times.
- A/B testing allows two different versions to be market-tested live at the same time by randomly presenting one version or the other to every user.

## User data and viewport awareness

*d2admin offers robust user data collection and reporting to customize the user experience. Viewport awareness (responsiveness) also allows for useful content outside a website's normal boundaries.*

- Leads come with breakdown of user activity:
  - page views
  - button clicks
  - image/add clicks
  - search terms entered/search filters applied
- d2admin reports how often each vehicle in inventory is displayed in search, and how often those vehicles are loaded into the details page
- MyGarage gets gets an update:
  - now stores complete user history regardless of whether they've submitted a form
- The kinds of content that the extra side widgets can contain include:
  - specials
  - user-aware similar vehicles
  - site controls (user-aware quick menus, quick searches)
  - user search history/page history
  - MyGarage dashboard
  - rules-based offers/coupons

## Strategic Content

*You can tailor the user experience to individual user preferences.*

- Magnifiers emphasize different marketing categories for vehicles, based on user data. such as:
  - Emphasis on sun roofs and cooled seats during summer
  - Emphasis on heated seats and remote start during winter
  - Emphasis on MPG displays and targeted banners for users interested in eco-friendly cars
- SEO/SEM sniffing:
  - SEO: Use widgets to display quick searches/specials/similar vehicles, etc. that target user's search terms.
  - SEO: Coupons and discounts can be offered based on search terms.
  - SEM: centralized campaign management across search engines.
  - SEM: automated ad generation
  - SEM: pages can be re-built dynamically around the campaign that brought a user to the site
  - SEM: ROI data can be imported from each search provider and compiled into a single, d2admin report
  - Tighter affiliate tracking for contact details, including the ability to track activity on other sites
